Market Overview

The external sector account, with a healthy Balance of Payments surplus has been a key mainstay of India's macro-economic story. At the margin, with continuous FPI equity outflows as well as muted net FDI flows, the capital account dynamics have weakened over the last couple of years. With the Middle east hostilities widening the energy import bill, the current account deficit has widened at the margin with expected deficit likely to be above 2% of GDP in FY27. More significantly, India is expected to clock a Balance of Payments deficit for the 3rd consecutive year in FY27. The resultant currency market pressures have rightly focused attention on potential enablement of capital flows in the short term. Even as REER based indices continue to show currency as being undervalued, the near-term dynamics would be shaped by capital flow outlook.

Exhibit 1: Net capital flows at record low

Source: Bloomberg, SBIFM Research

EQUITY

Indian equities spent another month contending with the fallout from the Middle East conflict that erupted on 28 February 2026. While an early-April ceasefire briefly lifted sentiment, the closure of the Strait of Hormuz, the route for roughly a fifth of global petroleum trade, has persisted as a durable peace agreement remains elusive. Commercial transit through the strait has stayed anaemic, freight indices sit at multi-decade highs, and the Indian crude basket, having spiked from ~US\$69/bbl in February to ~US\$114/bbl in April, eased only modestly to ~US\$106/bbl in May. The energy shock has shifted the global narrative from reflation to stagflation. The most recent signals are tentatively encouraging - improved tanker movement points to early de-escalation - but full normalisation is far from assured, and the duration of the shock remains the single most important variable for markets.

Exhibit 2: Market snapshot, May 2026

Nifty (May end, 2026)	23,548 (-1.7% m-o-m, -9.5% YTD)
Brent / Indian crude basket	US\$92.1 (May end)/ US\$106 per bbl (May average)
INR/USD	95 (~5.7% YTD depreciation)
10-yr G-Sec yield	7% (+42 bps YTD)
RBI Repo (June-26 policy)	5.25%, neutral, on hold
FPI / DII flows YTD (CY26)	FPI: -US\$26 bn DII: +US\$41 bn

Source: Bloomberg, SBIFM research

Consequently, the month of May saw a 1.7% decline for the Nifty while the Sensex declined by 2.5% even as broader markets fared better with the Nifty Midcap 150 index rising 2.7% and the Nifty Small cap 250 index delivering 1.6%. The flow picture has aided this market complexion given DIIs (domestic institutional investors) have stayed buyers of equities amidst continued aggressive FPI (foreign portfolio investors) selling. DIIs have bought nearly US\$ 28 bn of equities since the war broke out, through the months of April, May and June, while FPIs over the same period have sold over US\$ 22bn. FPI selling has partly been driven by India's high import dependence for energy needs and partly by the continued preference for AI (artificial intelligence) related stocks and markets, an area in which India is seen as deficient. As a result, Indian equities as measured by the Nifty are still down nearly 15% in USD terms in 2026 while South Korea, seen as an AI play market, is up over 90% this year. Interestingly, while India's weight in MSCI EM (emerging market) index is sharply lower now versus 2HCY24 levels (nearly 20% then to 11% now), AI markets such as Taiwan and South Korea have now exceeded China's weight in the index.

India VIX, measure of Nifty index's implied volatility, which had eased significantly from the March highs suggesting peak pessimism is behind, has sustained above pre-war levels reflecting lingering uncertainty on energy supply.

Exhibit 3: India VIX still above pre-war levels

Exhibit 4: FPI selling is at unprecedented levels

Exhibit 6: India's weight in EM index sharply lower, AI markets Taiwan and Korea now exceed China!

Source: FactSet, SBIFM Research, Note: The chart plots weights in iShares MSCI EM ETF for the four countries.

Economic momentum has remained resilient in the April-May period with demand indicators such as imports, GST collections and bank credit holding up well. However, energy intensive sectors, air traffic and exports have been impacted. We expect India's real GDP growth to moderate to 6.5% in FY27 vs. 7.7% in FY26, reflecting the impact of elevated oil prices, supply chain frictions and a weaker monsoon. The twin shock, energy and climate, is likely to disproportionately affect the informal sector, including rural workers and urban MSME-linked labour. Heatwaves and weak monsoon directly impact farm output, while energy inflation erodes purchasing power across both rural and urban informal segments, which together account for nearly two-thirds of consumption.

Investment activity, however, remains relatively resilient, with the government continuing to front-load its capex push. That said, prolonged elevated oil prices could constrain government spending beyond the next few months, with spillover effects on private capex. We remain constructive on exports. Global trade has held up better than expected, and India stands to benefit from improved access to US markets and a sharp correction in the rupee (depreciating ~18% against the RMB). Nominal growth however could rise to 12% vs. 8.9% in FY26 on the back of higher inflation. Petrol and diesel price hike has begun reflecting pass through of energy shock to retail inflation. CPI inflation could therefore rise to 5.5% in FY27 vs. 2.1% in FY26.

On earnings, Nifty's Q4 FY26 results have broadly been in line with expectations on topline and EBITDA, while PAT growth has slowed to ~5% yoy (from ~8% the prior quarter). More significantly, forward earnings estimates have been revised lower, with downgrades clearly outpacing upgrades - the principal risk should the conflict prove protracted.

Exhibit 7: Nifty profit growth stays weak

Source: MOSL, SBIFM Research

Exhibit 8: Earnings downgrades continued in May

Source: FactSet, Bloomberg, SBIFM Research

The macro and earnings uncertainty, however, have made valuations reasonable. Valuations, as measured through our preferred gauge of earnings yield minus bond yields, are meaningfully off the 2024 highs and near historical averages now. On a relative basis, the sharp underperformance to emerging market peers has led to valuation premium reverting to historical averages versus extremely elevated premium in late 2024. In line with moderating valuations, sentiment as measured through our proprietary Equity Sentiment Index is off its euphoric extremes of 2024. Our asset allocation framework continues to signal a 60:40 equity-fixed income tilt (vs. a 50:50 benchmark), with early teens return expectations from large cap equities. On market internals, our frameworks continue to favour large caps given historical low polarization. Sectorally too, defensive sectors now look attractively placed relative to cyclical sectors, both on relative valuations and given the uncertain macro backdrop. We also lean towards companies with pricing power and strong balance sheets in the current environment.

In summary, while the near term could stay choppy as the energy shock works its way through earnings, the rupee, and policy, we increasingly see the near-term set-up as one of cautious optimism.

Exhibit 9: Large caps attractive versus broader markets

RBI Review

The RBI policy review in June was less about policy rates and more with respect to measures to enable capital flows. With relentless FPI equity portfolio outflows alongside muted net FDI, it was anticipated that some measures may be announced to incentivise debt flows. With respect to the policy rates, basis the prevailing guidance, the RBI was unlikely to adjust policy rates to deal with currency weakness. The overall set of measures announced by the RBI and the central government are expected to provide near term visibility on capital flows and possibly smoothen additional Bond index inclusion going forward for INR sovereign bonds. The broader impact can be summarised as follows.

Removal of Capital Gains and Withholding Tax (WHT) on FPI investment in Government securities- WHT and Capital gains tax on G secs for FPI's has been reduced to nil from 20% and 12.5% respectively (aside for rates applicable basis specific tax jurisdiction benefits- DTAA). Alongside the addition of more tenors under FAR, the measures are anticipated to lead to sovereign bonds being added in other indices such as Bloomberg Aggregate. However, on a standalone basis the possibility of flows would be a function of global rates, risk appetite and currency outlook.

Full Hedging Cost Support for FCNR(B) Deposits (till 30th Sep 2026): The scheme allows authorised dealer banks to raise fresh FCNR deposits with RBI bearing full hedging costs for mobilising fresh 3-5-year FCNR(B) deposits, with the objective of augmenting stable foreign currency inflows.

Concessional Forex Swap Window for PSU ECBs (till 30th Sep 2026): To incentivise external commercial borrowings by public sector undertakings with concessional swap support, helping PSUs manage foreign currency borrowing costs.

The most significant measures related to the FCNR and ECB swap subsidy. The full subsidy on FCNR swap should make these deposits cost effective from a bank's perspective. The success ultimately depends on both the leverage and the borrowing cost for subscribers in hard currency. Unlike the last scheme in 2013, currently the elevated US funding rates can be a constraint. However, early estimates point to reasonable flows under this category. Similarly, the extent of swap subsidy provided on ECB's should make this route cost effective.

Way Forward

The immediate impact of capital flow incentivisation is expected to cap further increase in yields in the short term funding markets such as Bank CD's as well as short tenor high grade bonds. A significant mobilisation of funds under this route by banks and PSU's should provide a respite to near term pressures on the currency. At the same time, the evolving external situation would determine the extent to which this is sustainable. From the monetary policy angle, the RBI has increased the FY27 average CPI estimates by 50bps to 5.10%. These numbers, basis the current context are likely to have an upside bias. Headline CPI inflation remains moderate at around 3.5% y-o-y in April 2026, but pipeline pressures are rising, reflected in a sharp increase in WPI inflation to 8.3%. The widening gap indicates limited pass-through so far, though retail inflation is likely to firm up as cost pressures transmit. Energy prices are beginning to feed into domestic inflation, with fuel price hikes and rupee depreciation significantly raising landed crude costs. Second-round effects through higher transportation costs and rising food inflation risks due to weather uncertainties are expected to broaden inflationary pressures, alongside potential pass-through to core inflation. As a result, CPI inflation is projected to rise materially in FY27, increasing from 2.1% in FY26. This clearly paves the way for an eventual reversal of the policy cycle over the coming months.

Under this backdrop of heightened global uncertainty RBI could find itself compelled to begin tightening sooner. For investors, this environment warrants caution on long-duration fixed income. Until there is greater clarity on the inflation trajectory, shorter-duration strategies may offer a more prudent way to navigate the evolving macro landscape. The announcements related to enabling dollar inflows are more significant in the near term, even as the policy stance has been along expected lines. With inflation estimates being marked up, the direction of policy rates over the coming months is anticipated to be higher. The concessional swap facility should enable a near term stabilisation in market rates at the shorter end and the FX markets.

Exhibit 12: CD spreads can tighten incrementally as supply may reduce

Source: Bloomberg, SBIFM Research

Muted deposit growth vs credit growth has led to material pressure in the money market funding curve. Currently spreads on AAA Bank CD's over corresponding maturity Treasury bills have remained elevated. The respite from potential deposit accretion through the foreign currency deposit route should enable spreads to remain lower over the coming quarter. At the same time, incremental fiscal pressures on account of higher subsidies should keep the sovereign curve elevated.

From an investment perspective, the environment points to a continued preference for carry strategies, with cautious positioning on duration given rising global uncertainties. The 1-3 yr segment of the curve remains attractive in the current context.

All data as of May 31, 2026

Investment Objective:

The scheme will adopt a passive investment strategy. The scheme invests in stocks comprising the Nifty 50 Index in the same proportion as in the Index, with the objective of achieving returns equivalent to Total Returns Index of Nifty 50 Index, by minimising the performance difference between the benchmark index and the scheme. The Total Returns Index is an index that reflects the returns on the index from index gain/loss plus dividend payments by the constituent stocks. However, there is no guarantee or assurance that the investment objective of the scheme will be achieved.

Product Labelling:

This product is suitable for investors who are seeking^:

- Short term regular income
- An open-ended Constant Maturity Index Fund tracking CRISIL-IBX Financial Services 3-6 Months Debt Index, subject to tracking error.

^Investors should consult their financial advisers if in doubt about whether the product is suitable for them.

All data as of May 31, 2026

Investment Objective:

The investment objective of the Scheme is to seek to provide returns that closely correspond to returns provided by SBI Gold ETF. However, there can be no assurance that the investment objective of the Scheme will be realized.

Scheme Details:

Inception Date:
12/09/2011

Fund Managers
Mr. Viral Chhadva
Managing this Fund: March 2026
Total experience: Over 19 Years

Benchmark/Underlying Index:
Price of Physical Gold

ISIN:
INF200K01HA1

Indicative Investment Horizon:
3 years+

Load Structure:
For exit on or before 15 days from the date of allotment – 1%
For exit after 15 days from the date of allotment - Nil

Minimum Investment:
₹5,000/- and in multiples of ₹1

Additional Investment:
₹1,000 & in multiples of ₹1

Options
Growth & IDCW

Plans Available:
Regular & Direct

SIP: The Scheme offers Daily, weekly, Monthly, Quarterly, Semi-Annual and Annual Systematic Investment Plan Daily - Minimum ₹500 & in multiples of ₹1 thereafter for minimum 12 installments
• Weekly - Minimum ₹1,000 & in multiples of ₹1 thereafter for a minimum of 6 installments or minimum ₹500 & in multiples of ₹1 thereafter for a minimum of 12 installments
• Monthly - Minimum ₹1,000 & in multiples of ₹1 thereafter for minimum six months (or) minimum ₹500 & in multiples of ₹1 thereafter for minimum one year
• Quarterly - Minimum ₹1,500 & in multiples of ₹1 thereafter for minimum one year
• Semi Annual - Minimum ₹3,000 & in multiples of ₹1 thereafter for a minimum of 4 installments
• Annual - Minimum ₹5,000 & in multiples of ₹1 thereafter for a minimum of 4 installments

1. Past performance may or may not be sustained in future and the same may not necessarily provide the basis for comparison with other investment.
2. Period for which scheme's performance has been provided is computed basis last day of the month-end preceding the date of advertisement
3. In case, the start/end date of the concerned period is a non-business day, the NAV of the previous date is considered for computation of returns.
4. The performance of the schemes is benchmarked to the Total Return variant of the Index.
5. Wherever NAV/Benchmark Index value is not available for start/end date for concerned period, the previous business day value of NAV/Benchmark Index is considered for return computation.
6. Different plans shall have a different expense structure. Performance for Schemes not having Growth Option has been calculated considering the IDCW Option and is Net of IDCW distribution tax, if any.
7. Period for which scheme's performance has been provided is computed basis last day of the month-end preceding the date of advertisement. In case, the start/end date of the concerned period is a non-business day, the NAV of the previous date is considered for computation of returns.

Benefits of Systematic Investment Plan (SIP) - SIP Performance

The Fund offers flexible and convenient Systematic Investment Plan (SIP) facility. To illustrate the advantages of SIP investments, this is how your investments would have grown if you had invested say 10,000 systematically on the first Business Day of every month over a period of time in the Respective Scheme by using XIRR approach. XIRR helps in calculating return on investments given an initial and final value and a series of cash inflows and outflows with the correct allowance for the time impact of the transactions. Data as on May 31, 2026.

1.Periodical SIP Performances (1Yr, 3Yrs, 5Yrs, 10 Yrs & 15 Yrs) are computed considering SIP Investment on 1st business day of every month.

2."Since Inception SIP" performance are computed considering 1st instalment on allotment date and thereafter on 1st business day of every subsequent month.

Disclaimer: The above investment simulation is for illustrative purposes only and should not be construed as a promise on minimum returns and safeguard of capital. The AMC / Mutual Fund is not guaranteeing or promising or forecasting any returns. Investors are advised to consult their financial advisor/consultant before taking any investment decision. SIP does not assure a profit or guarantee protection against a loss in a declining market. Please refer SID of the respective Schemes before investing. The performance of the schemes is benchmarked to the Total Return variant of the Index

Benefits of Systematic Investment Plan (SIP) - SIP Performance

The Fund offers flexible and convenient Systematic Investment Plan (SIP) facility. To illustrate the advantages of SIP investments, this is how your investments would have grown if you had invested say 10,000 systematically on the first Business Day of every month over a period of time in the Respective Scheme by using XIRR approach. XIRR helps in calculating return on investments given an initial and final value and a series of cash inflows and outflows with the correct allowance for the time impact of the transactions. Data as on May 31, 2026.

- 1.Periodical SIP Performances (1Yr, 3Yrs, 5Yrs, 10 Yrs & 15 Yrs) are computed considering SIP Investment on 1st business day of every month.
- 2."Since Inception SIP" performance are computed considering 1st instalment on allotment date and thereafter on 1st business day of every subsequent month.

1

Do your research:

Compare offerings (ETFs, Index Funds and FoFs) based on expense ratios, tracking error, underlying index, past performance and ease of access (opening of demat account / folio).

2

Open The Right Account

- For ETFs: Open a trading and demat account.
- For index funds and FoFs: Register with a mutual fund platform or the fund house website. Complete KYC and set up bank mandate to open a folio.

3

Invest

- For ETFs: Buy units through your Demat account just like you would purchase a stock.
- For Index Funds and FoFs: You can invest a lump sum or start a SIP to invest regularly.

4

Do your research.

Passive funds do not need constant attention but review occasionally to ensure they still align with your financial goals.

HOW TO READ THE FACTSHEET?

Fund Manager: An employee of the asset management company such as a mutual fund or life insurer, who manages investments of the scheme. He is usually part of a larger team of fund managers and research analysts.

Application Amount for Fresh Subscription: This is the minimum investment amount for a new investor in a mutual fund scheme.

Minimum Additional Amount: This is the minimum investment amount for an existing investor in a mutual fund scheme.

SIP: SIP or systematic investment plan works on the principle of making periodic investments of a fixed sum. It works similar to a recurring bank deposit. For instance, an investor may opt for an SIP that invests ₹500 every 15th of the month in an equity fund for a period of three years.

NAV: The NAV or the net asset value is the total asset value per unit of the mutual fund after deducting all related and permissible expenses. The NAV is calculated at the end of every business day. It is the value at which the investor enters or exits the mutual fund.

Benchmark: A group of securities, usually a market index, whose performance is used as a standard or benchmark to measure investment performance of mutual funds, among other investments. Some typical benchmarks include the Nifty 50, BSE Sensex, BSE 200, BSE 500, 10-Year Gsec.

Entry Load: A mutual fund may have a sales charge or load at the time of entry and/or exit to compensate the distributor/agent. Entry load is charged at the time an investor purchases the units of a mutual fund. The entry load is added to the prevailing NAV at the time of investment. For instance, if the NAV is ₹100 and the entry load is 1%, the investor will enter the fund at ₹101.

Note: SEBI, vide circular dated June 30, 2009 has abolished entry load and mandated that the upfront commission to distributors will be paid by the investor directly to the distributor, based on his assessment of various factors including the service rendered by the distributor.

Exit Load: Exit load is charged at the time an investor redeems the units of a mutual fund. The exit load is deducted from the prevailing NAV at the time of redemption. For instance, if the NAV is ₹100 and the exit load is 1%, the redemption price would be ₹99 Per Unit.

AUM: AUM or assets under management refers to the recent / updated cumulative market value of investments managed by a mutual fund or any investment firm.

Holdings: The holdings or the portfolio is a mutual fund's latest or updated reported statement of investments/securities. These are usually displayed in terms of percentage to net assets or the rupee value or both. The objective is to give investors an idea of where their money is being invested by the fund manager.

Nature of Scheme: The investment objective and underlying investments determine the nature of the mutual fund scheme. For instance, a mutual fund that aims at generating capital appreciation by investing in stock markets is an equity fund or growth fund. Likewise, a mutual fund that aims at capital preservation by investing in debt markets is a debt fund or income fund. Each of these categories may have sub-categories.

Tracking Error: Measure that indicates how closely the portfolio return tracks the benchmark return. Tracking error is the standard deviation of the difference of returns between a portfolio and the benchmark over a specified holding period.

IDCW: IDCW stands for 'Income Distribution cum Capital Withdrawal option'. The amounts can be distributed out of investors' capital (Equalization Reserve), which is part of the sale price that represents realized gains.

Note: For details on IDCW, please refer notice cum addendum dated March 27, 2021. In line with SEBI Circular no. SEBI/HO/IMD/DF3/CIR/P/2020/194 dated October 05, 2020, nomenclature of Dividend plans / options has been rephrased w.e.f. April 01, 2021.
